

Mudasir Qadir

Full Stack Engineer

mudasirqadirbhat@gmail.com | 9622752412

PROFESSIONAL SUMMARY

Results-driven Full Stack Engineer with over 3 years of experience designing and delivering responsive, performant web applications across multiple industries. Highly proficient in React.js, Next.js, and TypeScript on the frontend, with solid full-stack expertise in Nest.js, TypeORM, and Docker for building and deploying robust backend services. Skilled in Redux Toolkit and RTK Query for scalable state management, and experienced in owning features end-to-end — from database schema design through to polished UI delivery. Passionate about clean architecture, accessible interfaces, and collaborating within Agile teams to consistently ship high-quality software.

WORK EXPERIENCE

Full Stack Engineer | Mar 2025 – Present

GraphicWeave

- Took on expanded full-stack responsibilities, contributing to both frontend and backend development using React.js, Next.js, Nest.js, and TypeORM within a unified TypeScript codebase.
- Designed and implemented RESTful API endpoints in Nest.js, including authentication middleware, role-based guards, and database query optimisation using TypeORM.
- Containerised application services with Docker, streamlining deployment pipelines and ensuring consistent, reproducible environments across development, staging, and production.
- Collaborated with product and design teams to scope features end-to-end — from database schema design through to polished frontend delivery — reducing handoff friction and accelerating release cycles.
- Led code reviews across frontend and backend pull requests, enforcing coding standards and mentoring junior engineers on both sides of the stack.

Frontend Engineer | Sep 2022 – Feb 2025

GraphicWeave

- Architected and maintained scalable React and Next.js applications using TypeScript, Redux Toolkit, and RTK Query — improving data-fetching efficiency and enabling consistent cache invalidation strategies across multiple product lines.
- Worked closely with backend engineers to design RESTful API contracts, implement JWT authentication flows, and handle complex error states gracefully at the UI layer.
- Translated detailed Figma designs into pixel-perfect, fully responsive interfaces using MUI, Chakra UI, and Tailwind CSS, maintaining strict design-token consistency and ARIA accessibility standards.
- Built and maintained a shared internal component library, accelerating cross-team development velocity and enforcing consistent UI patterns throughout the product suite.
- Participated actively in Agile sprint ceremonies, code reviews, and retrospectives — championing best practices and supporting the growth of junior team members.

EDUCATION

Master of Science in Information Technology (M.Sc. IT) | Jan 2019 – Jun 2021

University of Kashmir

TECHNICAL SKILLS

Frontend React.js, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3

Backend & ORM Nest.js, Node.js, TypeORM, RESTful APIs, API Authentication

State & Data Redux Toolkit, RTK Query, Axios, React Query

UI & Styling Tailwind CSS, Material UI (MUI), Chakra UI, Ant Design, Bootstrap

Forms React Hook Form, Formik, Zod

DevOps & Tools Docker, Git, GitHub, Jira, Postman, Swagger, Figma, VS Code

PROJECTS

Intellimiant — AI-Powered Equipment Repair Assistant

React.js · Next.js · TypeScript · Redux Toolkit · Nest.js · Docker · Tailwind CSS

- Designed and built the complete frontend of an AI-driven diagnostic platform that helps people in remote areas of the United States troubleshoot and repair electrical equipment — primarily generators and off-grid power systems — without needing to wait for a mechanic.
- The application guides users through intelligent, conversational step-by-step repair workflows, reducing dangerous equipment downtime and expensive callout fees in areas with limited infrastructure.
- Built dynamic diagnostic wizards and multi-step form flows using React Hook Form and Zod, paired with RTK Query for real-time communication with the AI inference backend.
- Leveraged Next.js server-side rendering to ensure fast initial load times for users on slower rural internet connections, and containerised the full stack with Docker for cross-environment consistency.

Pharma Labs — Health & Pharma E-Commerce Platform

React.js · TypeScript · Redux Toolkit · RTK Query · MUI · Axios

- Contributed to a production-grade health and pharmaceutical e-commerce platform, following Agile methodology with two-week sprints.
- Implemented advanced product listing pages with multi-parameter filtering, sorting, and pagination — consuming complex API responses through RTK Query's caching and normalisation layer.
- Built complete user authentication flows and a multi-step secure checkout experience, including cart management, address handling, and order confirmation.
- Ensured WCAG-compliant, mobile-first responsive design across all key user journeys.

Tarbiyat — Multi-Role Learning Management System

React.js · TypeScript · RTK Query · Chakra UI · React Hook Form

- Developed the frontend of a comprehensive LMS supporting four distinct user roles — Admin, Teacher, Parent, and Child — each with a fully custom dashboard and tailored feature set.
- Implemented client-side role-based access control, ensuring every user sees only the components, routes, and data relevant to their permissions.
- Built assignment creation and submission workflows, file upload modules with progress indicators, and interactive progress tracking views for parents and teachers.

Fishing Slot Booking Application

React.js · TypeScript · Redux Toolkit · Tailwind CSS · Axios

- Designed and built a real-time pond and fishing slot booking platform, allowing anglers to browse available locations, view live time-slot availability, and complete reservations through a clean, accessible interface.
- Implemented a live availability polling system using RTK Query, ensuring users always see up-to-date slot information without manual page refreshes.
- Prioritised mobile responsiveness and cross-device usability throughout, given the outdoor context in which users most commonly access the application.

Influnaire — Influencer-Brand Campaign Marketplace

React.js · TypeScript · RTK Query · Ant Design

- Built the frontend of a two-sided marketplace connecting brands with digital influencers for promotional campaigns, with dedicated dashboards and flows for each user type.
- Brands can create campaigns, set budgets, track performance metrics, and review influencer applications — all built with rich Ant Design data tables and custom filtering components.
- Influencers can browse open campaigns, track collaboration statuses, and monitor engagement analytics through an intuitive, notification-driven interface.

MDEC Nomad Platform — Cross-Border Talent & Residency Portal

OutSystems · REST API Integration · Role-Based Dashboards

- Contributed to a platform commissioned by Malaysia Digital Economy Corporation (MDEC) to facilitate remote work visas and digital nomad residency applications for global professionals.
- Developed multi-step onboarding forms, dynamic document upload workflows, and role-based dashboards for applicants, reviewers, and administrators using OutSystems.
- Focused on delivering an accessible, globally inclusive experience optimised for varying network conditions and non-native English speakers.

YourYoda — Mentor Discovery & Session Booking Platform

React.js · Next.js · TypeScript · Redux Toolkit · RTK Query · Tailwind CSS · Nest.js

- Developed the frontend of a mentor-matching platform enabling mentees to discover mentors based on expertise, industry, and availability, and book one-on-one sessions through a seamless interface.
- Built a rich mentor profile browsing experience with advanced filtering by skill, category, and rating — allowing mentees to quickly identify the right mentor for their specific goals.
- Implemented a full session booking flow including calendar-based availability selection, booking confirmation, and session management dashboards for both mentors and mentees.
- Developed separate role-based dashboards giving mentors tools to manage availability, review upcoming sessions, and track mentee engagement, while mentees can view session history and manage bookings.

Arnotts Biscuits — Quality Control Management System

OutSystems · Workflow Automation · Role-Based Access Control

- Developed a digital quality control platform to replace manual, paper-based production checks at Arnotts Biscuits — significantly improving traceability and operational efficiency.
- Built role-specific interfaces for Quality Inspectors, Line Supervisors, and Management, enabling real-time defect logging, batch compliance tracking, and automated escalation workflows.
- Implemented automated report generation and dashboard summaries that gave management instant visibility into production quality trends without manual data aggregation.
